BA CASE STUDY · FMCG FINANCE OPS

Every Rupee

Every short-paid rupee gets an owner, a reason and a deadline.

everyrupee-o2c.vercel.app

WHY · THE PROBLEM

Short-payments sit unexplained and unowned

₹ gap

The gap has no owner

Distributors pay less than the invoice. The difference lands in a queue nobody owns, with no reason attached.

45–90 days

Slow claims cause it

Distributor claims take 45–90 days to settle and about 35% are rejected, so short-paying becomes how distributors get their money back.

#2 reason

It strains the channel

Slow claim settlement is reported as the second-biggest reason distributors drop a brand. In Oct 2025 distributors protested against Tata Consumer.

Claim-cycle and rejection figures are vendor-reported (Spirestock). The Tata Consumer protest is independent context (Storyboard18).

A reconciliation workflow on top of the ERP

Every short-paid amount is classified, owned, approved and closed. The ERP stays the system of record; nothing is replaced.

Classify

8 business rules sort each gap: scheme claim, damage, TDS and more.

Control

Maker-checker above ₹10,000, an SLA clock on every case, and escalation where budget is missing.

Close

Every case ends in a credit note or a recovery, with a posting reference logged.

HOW · IT WORKS

From bank statement to closed case

1

Upload

Bank statement CSV in; the narration parser matches each payment to its invoices.

2

Classify

8 business rules (BR-1 to BR-8) assign a reason and an owner to each short-paid amount.

3

Approve

Maker recommends, checker approves above ₹10,000. Each case runs on an SLA clock.

4

Escalate

An unbudgeted scheme claim goes to the Regional sales head on a 3-day SLA: charge to trade budget, or recover.

5

Close

Credit note or recovery from the distributor; posting reference recorded.

Every time a payment lands short of the invoice

When it runs

Daily, as bank statements arrive and distributor payments are matched against open invoices.

Who it is for

Finance ops and accounts receivable work the queue; a checker approves larger amounts; the Regional sales head decides unbudgeted scheme claims.

Deliberately out of scope

Replacing the ERP, auto-blocking dispatch to distributors, and GST credit-note rules beyond what is documented. Those stay with existing systems and policy.

THE BUSINESS CASE

Cash back, without replacing the ERP

COST TO TRY

Sits on top of the ERP: no migration, no new system of record.

VALUE

Recovers cash on invalid deductions and settles valid claims fast, removing the reason to short-pay.

CONTROL

Maker-checker, SLAs and a posting reference on every rupee: audit-ready by design.

Built and testable today: BRD and one-pager (PDF) · 8 business rules, BR-1 to BR-8 · Maker-checker above ₹10,000 · SLA routing and escalation · 11 UAT cases that run in the browser · Jira-ready user stories (CSV)

Validate first

Ask finance teams: how long does a valid distributor claim take to settle today, and who owns an unexplained short-payment?
