Portfolio case study by Rupak Ghanpathi · built solo · sample data

A distributor pays short. On day 31 it's still nobody's problem.

Every Rupee is a short-payment reconciliation desk for FMCG finance teams, built from Cello World's public filings. Every gap gets one owner and ends in a credit note or a recovery.

Try the live desk › Talk to Rupak

The hard part of a deduction isn't matching it. It's owning it.

The call I made: control over speed. No auto write-offs, maker-checker above ₹10,000, strict matching at launch. Fewer auto-matches and more manual work, on purpose.

Today's short-payments

Click a gap: what, why, who, how it ends.

Sample data · 4 gaps · ₹17,590

₹1,180	Scheme claim Festival discount, budget approved	Closed
₹12,400	Scheme claim No approved budget: a verbal promise	1 day left
₹3,150	Damage claim Proof of delivery attached	Needs checker
₹860	TDS Tax withheld under section 194Q	Matched

₹1,180 · Scheme claim

Festival discount, budget approved

WHAT Paid ₹10,620 on ₹11,800; took a 10% festival discount.

WHY Budget approved, evidence attached: valid (BR-3).

WHO Asha, finance ops. Under ₹10,000, no checker.

HOW GST credit note ₹1,180 (₹1,000 + ₹180 GST). Distributor reverses; brand recovers ₹180.

Step 1 of 5 · **Payment arrives.** ₹10,620 on a ₹11,800 bill.

Same discipline for a lender: NACH bounces →

+14% vs +8.8%	₹3.5–5	24 days
Cello's receivables vs revenue, FY26	distributor margin per ₹100	to the credit-note deadline, 30 Nov

GO DEEPER

Open what you care about

The gap, two ways

The same ₹12,400 gap two ways, and the chain from a public filing to a passing test.

	HOW IT OFTEN RUNS TODAY	ON THE DESK
Explained	Day 31, if ever	**Same day, by rule**
Where it lives	Email threads, no owner	**One case, one owner, one deadline**
Who decides	Whoever replies first	**Regional sales head, 3-day SLA (BR-8)**
How it ends	Silent write-off, or never	**Credit note or recovery, with a posting reference**
Audit trail	Rebuilt from inboxes	**Every action logged by name and time**

Illustrative: one gap from the sample data, traced through the workflow. "Today" is the common manual pattern, not a measured baseline.

0 auto write-offs · maker-checker above ₹10,000 · 14 rules, 25 tests across brand and lender modes, run in the browser

A deduction can have a tax deadline: 30 November

Receivables vs revenue, distributor margins, and the credit-note deadline in detail.

+14% vs +8.8%

Cello's receivables outgrew revenue

About ₹34 Cr above revenue pace, FY25→FY26.

Annual reports · my estimate, a reason to look, not a diagnosis

₹3.5–5

Distributor margin per ₹100

Too thin to wait on slow claims, so they deduct.

AICPDF, Jun 2026

THE PART NOBODY OWNS

A deduction can have a tax deadline.

When a brand settles a scheme claim with a **GST credit note**, it gets back the GST already paid on the discount. That credit note must go out by **30 November after the financial year ends** (or the annual return date, if earlier). For FY 2025-26 supplies, that's **30 November 2026**.

Many brands settle schemes with a plain **financial credit note** instead and keep the GST cost. From 1 Nov 2026 the GST route gets easier, so more claims will qualify. An undecided deduction quietly loses that choice after the deadline.

The brand's GST gain is the distributor's input-credit reversal. That's why the two sides negotiate which kind of credit note gets issued.

CGST Act s.34(2); s.15(3)(b) as amended by Finance Act 2026; CBIC Circular 251/08/2025.

Summarised from public sources, Oct 2026. Not tax advice.

24

days to the FY 2025-26 credit-note deadline

What it's costing you

Plug in your own numbers, plus the one question I'd ask your team.

Monthly billing to distributors (₹ lakh)	500
Share short-paid (%)	3
Days to settle	60
Cost of money (% a year)	12

₹30 lakh

cash stuck at any time

₹3.6 lakh

yearly interest cost

Billing × share × days÷30 = cash stuck. Try your own numbers.

THE QUESTION I'D ASK YOU

Which deduction type creates the most tickets or manual work for your customers today?

Answer it in one line

Costs, mistakes, risks

What this design costs, what I got wrong, and where it could fail.

What this costs

- Fewer auto-matches at launch: strict matching rejects fuzzy ones.
- More manual review: anything above ₹10,000 needs a second person.
- A slower first close: Sales must enter scheme dates and budgets before rules can accept a claim.

What I got wrong: v2 was a wall of text, so I rebuilt it as something you can run, because a spec nobody executes isn't a spec.

How I'd work from week one

1. **Evidence first.** Every fact dated and sourced.
2. **One owner per gap.** One decision, one deadline.
3. **Testable rules.** 14 rules, 25 tests, "must block" cases included.
4. **Controls built in.** Maker-checker, no auto write-offs. Zero SOX findings at HDFC.

Where it could fail, and the fix

1. **Distributors pay the old account.** Keep it open a quarter; Sales gets a weekly list.
2. **Schemes change mid-quarter.** No dates and budget from Sales, no valid scheme.
3. **Sales overrides the credit flag.** It never blocks an order; overrides are logged by name.

Runs in your browser. Uploaded files never leave your device. **No sign-up, no tracking.**

Sample data only. Sources, and what I don't claim >

I'm Rupak. I spent 2.5 years as a Business Analyst at HDFC Bank: 25+ BRDs, 15+ releases on time, zero SOX findings. I built Every Rupee alone: from Cello's annual report to the rules, product and tests.
